

JUB

SINCE 1910
JUB HOLLAND

Royal supplier
of colour

2020/21

UK EDITION

Royal supplier *of colour*

We are very proud to offer you our new bulb catalogue 2020/2021.

In addition to the many sustainably grown new varieties and mixtures from our own nursery, we are also keen to report that our new partnership with **Buglife** has resulted in various plantings of the special Buglife mixture, last autumn. Together with this UK charity we aim to improve the conditions for bees, butterflies and all other invertebrates by creating important B-lines (see page 15).

As a result of the increasing problems with the oak processionary moth (OPM), JUB Holland has compiled a special OPM mixture in collaboration with Silvia Hellingman of Hellingman Research and Advice. The OPM mixture helps to attract the natural enemies of the oak processionary moths and caterpillars early in the season, such as parasitic flies, parasitic wasps, beetles, green lacewings etc. More about this exciting development on pages 20-21 and on our website.

You may not be familiar with the term 'Rain Gardens' yet. What rain gardens, also named bioretention facilities, are and the possibilities which they can offer for flower bulb applications can be read in the article by landscape designer Carien van Boxtel on pages 22 - 23.

The thorough knowledge of bulbs forms the foundation of our 110-year-old family business. Over a century of know-how about the industry, its products and the market, got awarded the Dutch Royal Warrant in 2010. Our company distinguishes itself through personal contact with our customers. JUB Holland offers excellent service, advice and knowledge and ensures an efficient ordering process.

Our JUB specialists (see page 131) are happy to provide you with advice.

Your Royal supplier of colour,

Team JUB

WEBSITE

Our website www.jubholland.nl continuously evolves to provide even more information about our company, our activities, products and creative ideas.

Read up on the history of JUB Holland and learn about the nursery, our Landscape as well as Retail activities and practical items like the full terms & conditions and our privacy statement.

You will find our full range of the individual varieties, mixtures and colour combinations, complete with information like flowering time, height, planting time etc.

Our programme for 2020

CERTIFICATES OBTAINED BY JUB:

JUB PARTNERS:

JUB Holland is versatile

QUALITY AND KNOW-HOW

JUB Holland is a fourth generation family business which has experienced many innovative developments in recent years. Because of our current product and market knowledge and our many years of experience, we can offer the best quality and service.

On the photo the management of JUB Holland.

JUB TRIAL GROUNDS

JUB has its own trial grounds, packed with more than 850 varieties. During the Spring and our Study Days, it is possible to visit the trial grounds and our nursery.

OUR NURSERY

JUB Holland is one of the few companies which is still both grower, trader as well as exporter. Through our years of experience in the cultivation of bulbs, trade, forcing and breeding, our company has extensive knowledge and expertise in all aspects. Our nursery is PlanetProof certified.

STUDY DAYS

Every year JUB organises the Study Days in April. Customers of JUB get the opportunity to have a look behind the scenes. Excursions and various presentations give a good inside about our company and the latest innovations.

JUB TODAY

JUB Today shows through various social media channels the latest JUB bulb trends and facts. You will stay up-to-date via JUB Today.

BULB DESIGN

Together with Carien van Boxtel we can ensure a complete design of your bulb planting. Ask for the possibilities.

WE CARE ABOUT THE ENVIRONMENT: PLANETPROOF

We are proud of our environmental certificate PlanetProof, which has been developed in collaboration with various environmental organisations. With this certificate, JUB remains a leading role within the bulb sector.

WHAT IS PLANETPROOF?

Our company is MPS-A and NL-Greenlabel certified, and was one of the first bulb companies to have achieved the PlanetProof label. PlanetProof bulbs are grown by pioneering growers, using innovative techniques.

PlanetProof focuses on the following disciplines:

- Soil, landscape and biodiversity
- Water
- Energy
- Production and consumption
- Climate
- Animal health and -wellbeing

More about PlanetProof:
www.planetproof-international.eu

BIODIVERSITY

Biodiversity is a priority for JUB. In this catalogue you will find a lot of information about biodiversity. What it means, how JUB thinks about it and what you can do about it yourself.

JUB Holland at Keukenhof 2019/2020

JUB Keukenhof borders end of March 2019

JUB BULB BORDERS AT KEUKENHOF 2019

The JUB borders designed by Carien van Boxtel in 2019 were named 'Nude & Black' and 'Nude & White': A very dramatic dark border next to a fresh white-green border, both with salmon and 'nude' accents.

The borders were made up of several layers, in which many varieties were planted.

Both mixtures can now be ordered: see page 68 for more details

JUB Keukenhof border 2019 Nude&Black

JUB Keukenhof border 2019 Nude&White

DESIGN OF THE JUB KEUKENHOF BORDERS 2020 BY CARIEN VAN BOXTEL

Carien van Boxtel, designer at JUB Holland about our JUB 2020 Keukenhof borders:

"This year I got inspired by colour temperatures and made a choice between hot colours : warm red, brown and orange, and cool colours: powdery mauve, lilac and lavender pink that I use in mixed combinations. This results in an unusual counterpart from very different colour families and it becomes exciting whether the concept works out well in reality. 170.000 bulbs (46 and 48 different varieties per border, respectively) have been planted in 3 layers (lasagna planting)".

JUB Keukenhof border 2020. The bulbs are placed in position before planting

Bulb inspection by Carien van Boxtel

VISIT KEUKENHOF TO SEE THE RESULT

The Keukenhof season in 2020 runs from March 21 to May 10. We invite you to visit our borders and of course the entire Keukenhof. To follow the changing looks of the plantings it is recommended to visit the park and our borders several times! We look forward to seeing you in our garden; nr. 14 close to the mill.

JUB Keukenhof borders 2020 are being planted by the Keukenhof gardeners

JUB Flowerdesigner App

SPRING COMES TO LIFE VIRTUALLY

SEE THE RESULT INSTANTLY

We have the option to show you how the verges or borders will look when the bulbs are in full bloom.

How does the app work?

1. We take a photo of the area where the bulbs are supposed to be planted. You can also take a photo yourself and send it to us. We place the photo in the designer app.
2. The area to be planted is defined.
3. Select a bulb mixture or individual varieties. There are many different varieties and mixtures to choose from. It is also possible to choose the density of bulbs per square metre.
4. Now you can see the result of what you have selected and what it will look like in reality.

With the tool it will be easier to get an impression of the many possibilities with flower bulbs. Do you have an area that you are considering to enhance by planting bulbs? Contact your JUB specialist and discuss the options.

Biodiversity: bulbs for bees and butterflies

WHAT IS BIODIVERSITY ?

Bees on Muscari

Biodiversity is a term we use to describe the richness of nature. It is about the great variety of animals, plants, habitats and genes. By interaction with environmental factors, biodiversity creates ecosystems in which organisms can live, for example humans.

The habitats of bees and butterflies have become increasingly smaller and are also increasingly further apart. Floral roadsides, gardens and public green spaces can constitute an important link between these habitats.

BULBS FOR BEES

The bulbs which we use in our bee mixtures all belong in the top 10. The botanical forms of all bulbs mentioned below are good for bees. “Bees” include both honey bees and wild bees. The mentioned varieties are examples of the tested species. The nectar and pollen value depends on various conditions such as weather, location, etc.

In the two columns, the values are given from 1 (moderate but useful) to 5 (very good).

	Nectar	Pollen
Allium sphaerocephalon, moly, giganteum	5	5
Nectaroscordum siculum	5	5
Crocus (species and large flowering)	5	5
Chionodoxa luciliae, sardensis	3	3
Scilla bifolia and siberica	3	3
Muscari armeniacum and ‘aucheri varieties’	3	3
Galanthus	3	3
Hyacinthoides non-scripta	3	3
Eranthis	3	3
Botanical tulips	2	2
Anemone blanda and nemorosa	1	2
Ornithogalum umbellatum	1	1
Leucojum aestivum	1	1

MANY BULB FLOWERS ARE ATTRACTIVE TO BEES AND BUTTERFLIES

Many bulb flowers are attractive to butterflies and bees. They owe this to the large amount of nectar in their flowers. Bees and butterflies are fond of it. Nectar is a sweet syrupy liquid containing sugars, proteins and vitamins.

The bees and butterflies need those substances to lay eggs. And while they fly from flower to flower, they take care of pollination of the flowers. A win-win situation.

Butterfly on *Allium giganteum*

Bumble bee on *Hyacinthoides non-scripta*

COOPERATION WITH BUGLIFE AND THE BUTTERFLY FOUNDATION

Together with organisations such as Buglife, the Dutch Beekeepers Association and the Dutch Butterfly Foundation, we have developed special mixtures which are bee and butterfly friendly.

BULBS FOR BUTTERFLIES

The flower bulbs which we use in our butterfly mixtures are all in the top 10 of butterfly-friendly plants. Of the bulbs below, all specie forms are good for butterflies. The varieties are examples of valuable types. The nectar and pollen values depend on various other conditions such as weather, location, etc.

In the two columns, the values are given from 1 (moderate but useful) to 5 (very good).

	Nectar	Pollen
<i>Allium sphaerocephalon</i> , moly, <i>giganteum</i>	5	5
<i>Nectaroscordum siculum</i>	5	5
<i>Chionodoxa forbesii</i>	3	3
<i>Hyacinthoides non-scripta</i>	3	3
<i>Muscari armeniacum</i> and 'aucheri varieties'	3	3

SOME SAMPLES OF OUR UK BULB PROJECTS

National Trust Barrington Court, UK

Allium Ambassador at Kew Gardens, UK

National Trust Ham House and Garden, UK

PARTNERSHIP BUGLIFE AND JUB HOLLAND

Buglife is the only organisation in Europe devoted to the conservation of all invertebrates. They're actively working to save Britain's rarest little animals, everything from bees to beetles, worms to woodlice and jumping spiders to jellyfish. "If we and the rest of the back-boned animals were to disappear overnight, the rest of the world would get on pretty well. But if the invertebrates were to disappear, the world's ecosystems would collapse". Wise words of Sir David Attenborough.

GET BRITAIN BUZZING CAMPAIGN

Strawberries, chocolate, apples, orange juice, tomatoes, peas, one in every three mouthfuls we eat and nine out of every ten wildflowers have one thing in common they all depend on pollination. But our pollinators are facing unprecedented decline hence Buglife are leading the Get Britain Buzzing Campaign and that's why they see JUB Holland as a key strategic partner. Bulbs play an ever increasingly important role in providing food for our pollinators from snowdrops and crocuses as the year starts through to Autumn flowering Colchicums.

SPECIAL BUGLIFE MIXTURE

JUB Holland supports Buglife by a contribution for every square metre planted of their special biodiversity mixtures. The bespoke Buglife mixture has been developed in 2019, to include a range of bulbs that provide nectar and pollen across early Spring, including such favourites as alliums. This mixture is perfect to naturalise in meadow areas to extend the flowering season or can make stunning displays in a bed alone.

Since World War Two the UK has lost an area of wildflower meadow equivalent to one and a half times the area of Wales. Modern warmer winter weather produces many days with temperatures above five Celsius preventing hibernation and forcing bees to go in search of food. Bulbs are one of the few providers of nectar and pollen at this inhospitable time of year.

Buglife have been mapping **B-Lines** across the UK, routes that connect our best meadows to others enabling pollinators to move around the country. Have a look where the B-Lines cross your areas and plan to add a contribution to the flowering highways that could all start with a large area of Spring flowering bulbs.

Herbs and flower bulbs

THE CONCEPT & BIODIVERSITY

Biodiversity in the urban environment is becoming more important! In addition, much attention is paid to ecological management and the development of herbaceous vegetations.

In order to achieve a well balanced biodiversity and to guarantee a long flowering period, we are experimenting with the concept of combining bulbs and herbs.

Within this concept, the forces of stable and native herb vegetations are combined with a specifically developed natural bulb mixture. This creates a vegetation with a long flowering period, great added value for biodiversity and extensive, ecological maintenance.

Our sales team is pleased to give you further information regarding this concept.

Alliums in late Spring

Wild flowers in Summer

Green Cities; The positive effect of Green Living

WHAT DO 'GREEN CITIES' DO?

Urbanisation and climate change call for new solutions to maintain and improve the quality of life in our cities.

Public green space has a positive effect on biodiversity, climate, wellness and air quality. This impact ensures that cities are becoming better places to live and work. 'Green Cities for a Sustainable Europe' is a platform that encourages the greening of public spaces by providing innovative ideas, information based on scientific research, and technical expertise. Its activities address certain themes: health, climate, the economy, biodiversity and social cohesion. 'Green Cities for a Sustainable Europe' was launched in 2018 by the ENA (European Nurserystock Association) and nursery organisations in Belgium, Bulgaria, Denmark, United Kingdom, France, Germany and The Netherlands.

Parks with trees, shrubs, water basins and recreational areas as well as more extended forest lands surrounding urban centres will mitigate the consequences of climate change in urban areas, health, weather, biodiversity, health and will also play a positive role in social cohesion.

The main goal of 'Green Cities' is to increase awareness of this important issue.

Bulbs for roof gardens

BULBS ON THE ROOF?

Lush roof gardens brighten up more and more roofs. Beautiful borders of perennials combined with swaying ornamental grasses. Together with the supporting structure of trees, hedges and shrubs they form a beautiful and natural element. Strategic eyecatchers are the flower bulbs on the roof. This complete ecosystem definitely enhances biodiversity.

Due to the double use of land, the roof can be used optimally as a second ground level.

A garden roof is ideal for living, working, exercising, playing and relaxing.

Perennials, annuals and bulbs

CREATE COLOURFUL MIXED SPRING BORDERS BY COMBINING BULBS, ANNUALS AND PERENNIALS.

Many borders with just perennials are virtually colourless in early Spring without bulbs. To enjoy these borders for a much longer time, bulbs can be planted that flower in March, April and May. In doing so, it is important to take into account which plants can already be seen in that period, already flowering or showing leaves. In addition, there are also many annual Spring flowers that can be used.

Oak processionary moth control; OPM bulb mixture stimulates natural enemies

OAK PROCESSIONARY MOTH CONSUMER PACK

The oak processionary moth continues to spread and is now well established in most of Greater London and in some surrounding counties and government studies show the pest spreading on an annual basis. In many places the fire hairs of the caterpillars (larvae) of OPM are a hazard to human and animal health.

Based on the results of our research, we now have a special mixture that attracts the natural enemies of the oak processionary moth, such as parasitic flies, parasitic wasps, beetles, green lacewings etc. This mixture is not only available for public green areas but also as consumer pack for planting around trees or to hand out as community planting project.

More information about the OPM control on our website www.jubholland.nl

The OPM mix flowering

NATURAL CONTROL

Four years ago, in collaboration with Silvia Hellingman of 'Hellingman Research and Advice', we started to conduct research into attracting the natural enemies of the oak processionary caterpillar/moth (OPM) with flower bulbs.

Efficiently combating the oak processionary caterpillars consists of various measures that interact positively. In addition to the preventive spraying of the caterpillars, the removal of the nests and catching the male moths with pheromone traps, stimulating the presence of natural enemies such as birds and insects is an essential link in the management of these troublesome caterpillars.

BULBS ATTRACT THE USEFUL INSECTS

Tachinid fly on narcissus

Hoverfly on crocus

Mining bee on anemone

There are many insects which fight the oak processionary caterpillars, such as parasitic flies, parasitic wasps, beetles, green lacewings etc. A large proportion of these insects depends on nectar and pollen during their lifetime as adult insects.

An example is the common green lacewing (*Chrysoperla carnea*). The larvae are active predators and feed on aphids, young caterpillars and other small insects. They can also be used in the biological control of insect pests on crops. The green lacewing adults hibernate buried in leaf litter at the edge of fields or other rough places, emerging when the weather warms up in Spring. Each female lacewing lays several hundred small eggs at the rate of two to five per day, choosing concealed spots underneath leaves or on shoots near potential prey. The larvae hatch in three to six days, eat voraciously and can consume large numbers of prey and completely destroy caterpillar colonies. In addition, earlier parasitic wasps are also active, which depend on pollen and nectar.

LURE THE NATURAL ENEMIES

The trick is to lure these natural enemies of the OPM to the desired locations early in Spring by planting flower bulbs. Yellow flowers attract a lot of insects, that's why it is important to plant daffodils. Blue grape hyacinths (*Muscari*) are nectar rich and are frequently visited by insects. Our special OPM mixture combines the most suitable varieties for the best possible result.

By planting the right bulbs we create a bridge to the later flowering vegetation that is sown to attract natural enemies. This combination creates the ideal conditions for the natural enemies. Besides, it is also good for bees and other pollinating insects that are already struggling in recent years and, moreover, it's an attractive and nature friendly option in the public eye.

Tachinid fly on Tulipa sylvestris

Rain Gardens and (bulb) planting schemes

BY CARIEN VAN BOXTEL, DESIGNER AT JUB

Carien van Boxtel

Garden and landscape designer Carien van Boxtel is the permanent designer and planting expert for JUB Holland. Together with JUB, Carien is working on various bulb projects with naturalising bulbs. Amongst others for the Dutch town Breda, where she has designed “Royal ribbons of bulbs in Royal colours” that ‘wrap up’ the entire town centre. Together with the residents, a number of special naturalising mixtures have been planted in the beautiful village of Kamerik in the centre of Holland. In the Dutch archeology museum Archeon, Carien and JUB are working together with a planting scheme using only historic bulbs.

WHAT IS A RAIN GARDEN?

In its simplest form, a rain garden is a shallow depression, with absorbent, yet free draining soil and planted with vegetation that can withstand occasional temporary flooding. Rain gardens are simple interventions designed to receive rainwater which has come from a downpipe or a large domestic paved area. The rainwater enters the soil and drains away into the ground or is taken up by the plants. They help our gardens to deal more effectively with heavy rain, but they also filter and clean run-off.

Rain gardens are designed to slow surface water run-off and improve water quality. However, it is a garden feature and should work for you in terms of the overall design of your property. Like any garden, there is range of possible planting styles: your rain garden might have ornamental, low maintenance ground cover, designed to provide a habitat for wildlife or grasses in combination with stones or gravel. When choosing plants you may want to consider height, colour and flowering period. Taller plants tend to be situated at the centre of the garden and shorter ones around the edges, so that all can be seen and so that deeper-rooted plants can benefit from the deeper soil in the middle of the bed. By grouping plants of various size and texture you will be able to create an interesting looking garden even when few flowers are in bloom. If you wish to create habitat for wildlife, plant native bulbs or plants that are known to attract insects like bees and butterflies and other wildlife

Leucojum aestivum Gravetye Giant

SUITABLE PLANTS

Plants that are suitable for a rain garden are not always bog plants, but must be resistant to dynamic or changing situations: often dry and sometimes (very) wet. Lawns are not suitable for rain gardens: lawn grasses cannot cope with a lack of oxygen. A perennial vegetation, whether or not combined with trees, is ideal. A limited range of flower bulbs is also very suitable for rain gardens.

Bulbs tolerate drought during their rest period and a number of varieties can be used very well in wet to damp locations. In all cases, the drainage must be optimal. A reasonable amount of food is also a condition. For optimal naturalising, the mowing management will have to be adjusted to the time it takes for the foliage to die so that the bulb can store food again for the next growing season.

Fritillaria meleagris

SUITABLE BULBS FOR RAIN GARDENS ARE:

Camassia cusickii (photo 1)
 Camassia leichtlinii 'Caerulea'
 Camassia quamash
 Nectaroscordum siculum (photo 2)

 Muscari azureum (photo 3)
 Muscari botryoides

Naturalising bulbs

NATURALISING AND LOW MAINTENANCE BULBS FOR WOODLAND AREAS, PARKS AND BORDERS

Naturalising bulbs, many of them being native varieties, can be found in this section.
Our naturalising bulbs are all nursery grown and not collected from the wild!
In general, they require minimal maintenance and many of them will grow in
(semi-) shady locations.

BIODIVERSITY AND NATURALISING BULBS

Naturalising bulbs provide colour from the early Spring until summer and in Autumn and are an important nectar and pollen source for (wild) bees, butterflies and other invertebrates. Especially in the sparse, first months of the year, bulbs such as winter aconite, scilla, snowdrop and crocus are indispensable for early flying bees and bumblebees. Autumn flowering crocuses and colchicums serve the late flying bees and other insects during September and October.

Naturalising bulbs

SINGLE SNOWDROPS - GALANTHUS NIVALIS - P. 104

Galanthus likes moist soil under deciduous trees and shrubs, but also thrives in a warm, sunny location.

WOOD ANEMONE - ANEMONE NEMOROSA - P. 101

Anemone nemorosa feels at home in a shady and humid place. This ground covering variety must be planted immediately upon arrival.

GLORY OF THE SNOW - CHIONODOXA LUCILIAE - P. 102

Chionodoxa grows in all well-drained soils in sunny or semi-shaded places. It is therefore very suitable for use under deciduous trees, shrubs and hedges.

HOLLOWROOT - CORYDALIS CAVA - P. 107

Corydalis cava prefers full shade between trees or shrubs, in a humus-rich soil containing moisture. Corydalis cava will produce full ground cover under the right conditions.

WOODLAND TULIP - TULIPA SYLVESTRIS - P. 90

Tulipa sylvestris likes a moist, nutrient-rich location in full sun. It grows well in grass and in light shade.

SNAKE'S HEAD FRITILLARY - FRITILLARIA MELEAGRIS - P. 103

Fritillaria meleagris or 'snake's head fritillary' needs a moist, moderately nutrient-rich soil. They also feel most comfortable in light shade.

Naturalising bulbs

CROCUS TOMMASINIANUS - P. 97

This crocus prefers a sunny spot or under deciduous shrubs. The crocus feels at home in almost all soil types as long as they are not too wet for too long.

	 biodiverse	 semishade
 2	 10 cm	 200/m ²

SIBERIAN SQUILL - SCILLA SIBERICA - P. 107

These scillas attract many bees. Plant them in a sunny to semi-shaded place in well-drained soil. Scillas propagate quickly through bulblets as well as seeds.

	 biodiverse	 semishade
 3-4	 15 cm	 150/m ²

ENGLISH BLUEBELL - HYACINTHOIDES NON-SCRIPTA - P. 104

English Bluebells prefer a light shade in a moderately dry to moderately moist soil.

	 biodiverse	 semishade
 4-5	 30 cm	 100/m ²

DOG'S TOOTH VIOLET - ERYTHRONIUM PAGODA - P. 108

Erythronium pagoda has beautiful flowers and attractive light mottled leaves. This variety thrives in a sandy humus-rich soil in shade to partial shade.

POET'S NARCISSUS - NARCISSUS POETICUS (VAR. RECURVUS) - P. 93

This is a beautiful late flowering, narcissus. Single, slightly scented flowers. Likes humus-rich soil and a sunny to semi-shaded location.

SUMMER SNOWFLAKE - LEUCOJUM AESTIVUM - P. 108

The name 'Summer Snowflake' is misleading, it flowers already in April / May. They grow well in a moist soil and are therefore suitable for use in clay or loamy soil.

Naturalising bulbs

WILD GARLIC - ALLIUM URSINUM - P. 100

‘Wild Garlic’ prefers a sunny or semi-shady spot in moist, calcareous soil. This allium produces a strong garlic-like smell during the flowering. Plant bulbs immediately upon arrival.

	biodiverse	semishade
5	35 cm	100/m ²

NAKED LADY - COLCHICUM CILICICUM - P. 98

Colchicums mainly grow in woodland and in wet meadows. They love a sunny to partial shaded place. They can also be used for indoor flowering, without soil or water.

	biodiverse	semishade
10 - 12	10 cm	30/m ²

ORNITHOGALUM NUTANS - P. 109

Ornithogalum nutans has broad leaves and prefers a sunny to semi-shaded location. The ‘Drooping Star-of-Bethlehem’ prefers a moist, limy soil.

	biodiverse	moist
4 - 5	25 cm	100/m ²

ARUM ITALICUM - P. 107

Arum italicum performs best in damp soil in shade or semi-shade and can easily be combined with ferns, ivy and hostas. The red-orange berries appear in August.

STAR OF BETHLEHEM - ORNITHOGALUM UMBELLATUM - P. 109

'Star-of-Bethlehem' likes a sunny to slightly shaded place on moderately moist and moderately nutrient-rich soil.

WINTER ACONITE - ERANTHIS HYEMALIS - P. 107

The winter aconite is one of the earliest flowering bulbs. Eranthis hyemalis does well under deciduous trees and shrubs.

Verges and grass areas

MAINTENANCE FRIENDLY BULBS FOR ROAD SIDES AND GRASS AREAS

Are you looking for easy manageable mixtures which will come back year upon year? Simply look in the section 'Verges and grass areas'. Here you will also find the bee and butterfly mixtures.

Some of our mixtures just flower in the early Spring, whilst others start early and flower until the end of June! Depending on your mowing regime, you can choose the most suitable mixtures.

Mixtures for verges and grass areas

MIXTURE TILBURG (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

2 - 5

10-30 cm

350/m²

6 >

A remarkable mixture of specie crocuses, followed by anemone blanda, clusiana tulips and muscaries.

Flowering period 2, April - May

2

MIXTURE ANTWERPEN

An early flowering mixture in pastels, with specie crocuses, snowdrops and scillas.

2 - 3

10-15 cm

200/m²

5 >

MIXTURE MAASTRICHT

A nice and very colourful mixture of specie and large flowering Dutch crocuses. Combining these two types results in an extra long flowering time.

2 - 3

10-15 cm

250/m²

5 >

MIXTURE LEIDEN (IN 2 FLOWERING PERIODS)

A beautiful mixture of many miscellaneous naturalising bulbs.

A perfect naturalising mixture for woodland areas.

2 - 5

10-25 cm

300/m²

7 >

Flowering period 1, February - April

1

Flowering period 2, April - May

2

Mixtures for verges and grass areas

MIXTURE NIJMEGEN (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

2-3 / 10-11

10-15 cm

300/m²

5 >

A truly special combination of Autumn flowering crocuses and Spring flowering crocuses, which surprises you twice per year!

Flowering period 2, October - November

2

MIXTURE VOORSCHOTEN

A surprising Spring combination of muscaries, anemone blanda and chionodoxas.

3 - 4

10-15 cm

250/m²

6 >

MIXTURE EIKENHORST

This mixture of blues and lilacs, flowers early in the Spring.

It is a combination of various miscellaneous bulbs and specie tulips.

MIXTURE HAARLEM

Large flowering Dutch crocuses in shades of blue and white are very suitable for early perennial flowering in lawns and other grass areas.

Mixtures for verges and grass areas

MIXTURE NOORDWIJK

An early flowering mixture of large flowering Dutch crocuses in yellow, blue, white and purple.

2 - 3

10-15 cm

200/m²

5 >

MIXTURE VEENENDAAL (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

A bee attracting mixture in two phases. In February-March the rich flowering Crocus Ruby Giant, followed in March-April by a blue-red mixture of specie tulips and muscaries.

2 - 4

10-25 cm

350/m²

6 >

Flowering period 2, March - April

2

MIXTURE BUSSUM

Bees and bumblebees are very dependent on bulbs in the early Spring. Especially crocuses and anemones are frequently visited for their nectar.

Our special mixture will attract bees and bumblebees during a long period!

MIXTURE HOUTEN (IN 2 FLOWERING PERIODS)

A natural mixture of early crocuses, followed by various specie tulips, botanical narcissi, muscaries and snakes head fritillaries.

Flowering period 1, February - March

1

Flowering period 2, March - May

2

Mixtures for verges and grass areas

MIXTURE AMSTELVEEN

This combination of chionodoxa (glory of the snow) and botanical narcissi ensures years of flowering.

 3 - 4

 10-25 cm

 250/m²

 6 >

MIXTURE PRINSENBEEK

Beautiful early flowering mixture for urban parks with muscaries, scillas, anemones, specie tulips and botanical narcissi.

 2 - 4

 10-20 cm

 350/m²

 6 >

MIXTURE LISSE

This stunning mixture of specie crocuses guarantees an abundant colour effect in the very early Spring.

 2 - 3

 10 cm

 250/m²

 5 >

MIXTURE HUIZEN

A very natural mixture of good naturalisers. Corydalis, scillas and chionodoxa form a fascinating colour combination together.

MIXTURE TYNAARLO (IN 2 FLOWERING PERIODS)

A mixture with a wide variety of bulb types for a long flowering period.

Crocuses, chionodoxas, botanical narcissi, puschkinia and specie tulips.

Flowering period 1, February - March

1

Flowering period 2, March - April

2

Mixtures for verges and grass areas

MIXTURE LELYSTAD

A nice mixture of anemones, botanical narcissi, botanical tulips, muscari and chionodoxa.

3 - 5

10-25 cm

330/m²

6 >

MIXTURE OXFORD (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

2 - 5

10-30 cm

350/m²

6 >

Flowering period 2, March - May

2

MIXTURE MIDDELBURG

This mixture of botanical narcissi offers a beautiful variation of colour, shape and flowering time.

It even includes some deliciously scented varieties.

BEE MIXTURE BREDA (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

Flowering period 2, March - April

2

Mixtures for verges and grass areas

MIXTURE BRUSSEL

This very colourful mixture of various tulips and daffodils is ideal for main roads.

2 - 4

25-50 cm

130/m²

6 >

MIXTURE LEERDAM (IN 2 FLOWERING PERIODS)

Flowering period 1, February - March

1

2 - 5

10-30 cm

400/m²

6 >

Flowering period 2, March - May

2

MIXTURE ROTTERDAM

A beautiful mixture of yellow narcissi and daffodils with an extended flowering period. It includes early small narcissi and the taller daffodils will flower until the end of April.

MIXTURE MOERDIJK (IN 2 FLOWERING PERIODS)

Flowering period 1, February - April

1

A mixture starting with abundantly flowering crocuses, botanical tulips and botanical narcissi, followed by alliums and camassias

Flowering period 2, May - June

2

Mixtures for verges and grass areas

MIXTURE FLORIADE (IN 3 FLOWERING PERIODS)

Flowering period 1, February - March

1

2 - 6

30-90 cm

120/m²

7 >

This mixture was a great success at the main entrance of Floriade 2012 in Venlo in the Netherlands. From early Spring until the summer you will enjoy the great diversity of flowers in this mixture.

Flowering period 2, March - April

2

Flowering period 3, May - June

3

MIXTURE AMSTERDAM

A well-balanced mixture of many types of large flowering daffodils in different forms, colours and shapes.

MIXTURE EDE (IN 2 FLOWERING PERIODS)

A surprisingly simple mixture with two colour periods. A bright yellow start in March, followed by pure white in April-May.

Flowering period 1, March - April

1

Flowering period 2, April - May

2

Mixtures for verges and grass areas

MIXTURE APELDOORN

A colourful mixture of botanical narcissi, with a contrasting addition of two tulip varieties.

2 - 5

20-50 cm

100/m²

6 >

MIXTURE SUN VALLEY

This cheerful early flowering mixture is a wonderful combination of 3 types of flower bulbs: botanical daffodils, crocuses and early tulips.

2 - 4

10-25 cm

225/m²

6 >

MIXTURE ZWOLLE

This mixture in pure white is an elegant combination of white crocuses, white chionodoxas, white scillas, white narcissi and white tulips.

2 - 4

10-50 cm

220/m²

6 >

MIXTURE VOLENDAM (IN 2 FLOWERING PERIODS)

Flowering period 1, Februari - April

1

2 - 6

40-90 cm

105/m²

7 >

Mixture Volendam is very suitable for road verges with rough vegetation, with its early and late yellow daffodils, followed by alliums and camassias as an extra surprise.

Flowering period 2, May - June

2

MIXTURE LIVERPOOL

Cheerful flowering Spring mixture with various types of daffodils and striking red tulips.

3 - 4

25-50 cm

130/m²

6 >

Mixtures for verges and grass areas

MIXTURE KENT (IN 2 FLOWERING PERIODS)

Colourful mixture with various narcissi and tulips in March / April, followed in May / June by camassias and alliums.

3 - 6

20-70 cm

110/m²

7 >

MIXTURE ARNHEM

Floral fireworks based on three months of yellow daffodils, contrasted by various red tulips.

2 - 4

30-50 cm

110/m²

6 >

MIXTURE BRIGHTON (IN 3 FLOWERING PERIODS)

Flowering period 1, March - April

1

Three different colours in one mixture. Yellow narcissi start off the show in March, followed by white narcissi and finishing with camassias in various shades of blue.

Flowering period 2, April - May

2

Flowering period 3, May - June

3

Mixtures for verges and grass areas

MIXTURE EINDHOVEN (IN 2 FLOWERING PERIODS)

Flowering period 1, February - April

1

This mixture is especially designed for road verges with rough vegetation. The flowering period starts in February with yellow daffodils, followed by fragrant narcissi in late-April. In May/June the alliums deliver a purple finish in the tall grass. Mowing can be done straight after the longest day in June.

2 - 6

30-80 cm

100/m²

7 >

Flowering period 2, May - June

2

MIXTURE MANCHESTER

A late Spring flowering colour sensation for verges and grass areas. A mixture of various alliums, camassias and daffodils.

5 - 6

50-100 cm

80/m²

7 >

BUTTERFLY MIXTURE ALKMAAR (IN 2 FLOWERING PERIODS)

Flowering period 1, May - June

1

Flowering period 2, June - July

2

Butterflies are an important link in the food chain and furthermore pollinate flowers when they visit them to suck up the nectar. Butterflies have high standards for their habitat and will only appear in places where the conditions are right. By planting this special mixture, butterflies get attracted in late Spring.

MIXTURE VENLO

Create a colour sensation in roadsides and grass areas with this intriguing mixture! Impressive blooms on tall, sturdy stems start to flower in late-Spring.

Flower heads of light and deep purple, along with creamy white, last for weeks, followed by the decorative seed heads.

Eye-catchers

BULBS FOR SPECIAL PLACES IN PUBLIC SPACE

Are you looking for a striking bulb mixture for a special location, to celebrate a specific event or to emphasise an important location? Visit the category 'Eye-catchers'!

These mixtures are also very suitable for containers and roundabouts. We have selected them by colour, height and flowering time.

Organic flower bulbs

VERIFIED AND CERTIFIED

We obtain our organic bulbs from reliable organic growers, who do everything possible to grow their bulbs as organically and sustainably as possible. These varieties also deliver a great contribution to the welfare of bees, butterflies and other insects (biodiversity).

Practical tips

MECHANICAL PLANTING, FEEDING, QUALITY, PLANTING LOCATION, ALPHABETICAL INDEX, JUB SPECIALISTS AND TERMS & CONDITIONS

25 years ago, JUB Holland developed a planting machine that plants bulbs in existing lawns and roadsides, in a simple manner. In this chapter you can find information about mechanical planting as well as feeding and mowing policies.

You will also find a handy list which shows each variety with the recommended location, specific features, durability and an alphabetical index.

Mechanical planting

MECHANICAL PLANTING OF FLOWER BULBS

Our special planting machine is ideal for planting large quantities of bulbs in existing grass, along roadsides, in lawns, roundabouts etc.

By planting the bulbs with our machine you will achieve a major reduction in labour costs. The machine is a combination of planter and (mini) tractor. A large container holds the bulbs, whilst at the bottom two belts deliver the bulbs to the 'plant feet'. Two vertical rotating knives open the turf just before the plant feet. The feet 'dive' into the ground and open up the turf, at which point the belts release the bulbs which fall into the soil and are then covered. The machine also puts the turf back in position, followed by a roller.

The planting machines

Filling the machine with bulbs

Bulbs on the belt before planting

Bulbs are being planted

Rollers put turf back in position

PLANT CAPACITY OF THE MACHINE

Under the right circumstances it is possible to plant approximately 10,000 daffodils or 25,000 crocuses/small bulbs per hour.

The speed of the planting may vary depending on factors like soil type, location and bulb size.

EMBANKMENT PLANTING

Especially for sloping areas we offer a machine that can plant on banks with a maximum angle of 30 to 35 degrees. This machine is provided with caterpillar tracks, and an additional plant foot so that a uniform effect can be achieved.

Embankment planter in action

Result on the bank in Spring

PLANTING WITH SIDE PLANTER

In order to plant closer to trees, we recently developed a side planter. This machine has a plant foot mounted on the side of the machine which enables us to plant between, or very close to, trees.

Planting with a side planter

Result of planting with a side planter

Feeding, fertilisation plan and mowing

FEEDING AND FERTILISATION PLAN

Autumn fertilisation

To preserve your bulbs, it is very important to provide them with food. JUB has therefore further expanded the service. It is now also possible to carry out feeding in the Autumn and Spring with our specially selected biological bulb fertiliser. This is the same fertiliser which we use for our own cultivation at our nursery.

In Autumn, the fertiliser is given simultaneously with the mechanical planting of bulbs in grass via a device installed on the planting machine.

An environmentally friendly organic food can be used in the Spring. The organic component in this fertiliser is converted into humus by soil organisms.

Spring fertilisation

MOWING

Mowing, on average 6-8 weeks after flowering

When using naturalising bulbs in grass areas, a commonly accepted guideline is that mowing can be started an average of six to eight weeks after flowering.

This will allow the bulbs enough time to produce seeds and die back naturally. An exception to this rule is the allium, which can be mown directly after flowering. The foliage of most alliums has already died back before flowering.

JUB Holland cares for quality

QUALITY AND KNOW-HOW

Bulb size control ✓

Quality control ✓

At JUB Holland attention to detail is very important to guarantee good quality.

- Storage of bulbs until packing and shipping
- Health of the bulbs
- True to name and size, delivery of the bulbs
- Packaging and transport of bulbs
- Packing of bulbs in netlon bags with colour labels incl. Plant Passport details.

Netlon bag with colour label + Plant Passport

Bulbs available in crates or netlons

Terms & conditions

General:

All quotations and deliveries by JUB Holland (Jac. Uittenbogaard & Zonen B.V.) are exclusively made on the basis of the general terms and conditions for flower bulbs by Anthos, the Royal Trade Association for Nursery Stock and Flower Bulbs, as well as the additional conditions below. The full Anthos Terms and Conditions for bulbs are available on the JUB Holland website. Any additional conditions applied by the buyer are hereby explicitly rejected, unless otherwise agreed in writing. By placing an order, the buyer accepts fully and without reservation these terms and additional conditions.

Quotations: All offers and quotations made by JUB Holland are entirely without obligation. Offers have a validity of 30 days. An agreement is concluded after it has been confirmed in writing by the seller. All prices of the products are quoted in Euros (€) excluding VAT, Ex Works Noordwijkerhout in The Netherlands, unless otherwise agreed. The minimum order unit per product is stated on the price list.

Delivery:

In a case of force majeure, including but not limited to harvest results, resulting in that JUB Holland cannot deliver products, we reserve the right to cancel or adjust the agreement in writing, completely or partially. Although the stated delivery time will be taken into account as much as possible, this delivery time is only approximate and can never be considered a strict deadline. JUB Holland is not liable for damage as a result of late delivery.

Payment:

Payment must be made within 30 days after the invoice date, unless otherwise agreed in writing. When paying within eight days, 1% payment discount is allowed. If the payment term is exceeded, JUB Holland is entitled to charge the statutory interest from the due date. As long as no full payment of all amounts invoiced by JUB Holland has taken place, the delivered products remain the property of JUB Holland and it has the right to take back the products. In the case of new customers, JUB Holland reserves the right to only deliver after advance payment.

Complaints:

The buyer is obliged to examine the products upon delivery for any visible and/or immediately observable defects. Complaints must be submitted in writing at the latest within seven calendar days after delivery. By submitting a complaint, the payment obligation of the buyer is not suspended.
